

Created especially for nurses, the Clinical Decision Making series helps to bridge the gap between content knowledge and clinical application. Case Studies in Medical-Surgical, Pharmacologic, and Psychiatric Nursing provides 120 nursing case histories that include critical thinking questions and answers based on real-life client situations. Every case contains a blueprint of variables that must be considered while evaluating a particular scenario, and are pertinent concerning the client nursing protocol and setting of care. Examples of these variables include age, gender, cultural influences, pre-existing conditions, legal issues, or communication skills. Each blueprint and case is different just as each clinical situation is unique. By simulating the decision-making process, learners gain the confidence needed to make informed clinical judgments that will make them successful practitioners. Simply stated, Clinical Decision Making shortens the distance between theory and practice like no other educational tool!

Health and Numbers: Basic Biostatistical Methods, Lone Working Personal Safety: A Guidebook for Health & Social Care Workers, Coding of Pediatric Preventive Care, Information Technologies in Medicine, 2 Volume Set, Homeopathy for Rabbits & Guinea Pigs - Veterinary Science Card, Back Pain Answers: Secrets Your Back Pain Specialist May Be Keeping From You, Build Ivywild: How awakening an old school is sustaining our world: Fennell Groups proposal to redesign cities from the neighborhood up, Biostatistics Practice Problems: Mean, Median, and Mode, Nursing the Spirit: The Art and Science of Applying Spiritual Care,
