Engagingly written by three experts with worldwide reputations in the field, Health Behavior Change presents an exciting method which can be used to help patients change their behaviour in both hospital and community settings. The method is applicable to any behaviour, such as overeating, physical inactivity and smoking or with patients struggling with the consequences of chronic conditions like diabetes and heart disease. Using brief, structured consultations with the client, the practitioner encourages the patient to take charge of decision-making concerning their health. It relies upon partnership between professional and patient rather than dominance of one over the other and is carried out in a spirit of negotiation rather than confrontation. The text clearly outlines the fundamental principles behind the method while applying it to practice. Problems of resistance and lack of motivation are explored and practical strategies to manage them are suggested. The patient is at the centre throughout. Short case examples and dilemmas from clinical settings ground the method in the reality of practice. Well accepted method. Reflects professionals current concerns with health promotion and effective use of time. Highly respected authors. Community focus. Genuine international market. Particularly relevant to US practice. US

spellings throughout.
