

Inventing medical devices ? A perspective from India

In this book, the author shares his experiences, anecdotes, insights and failures while inventing medical devices in India over the last five years. The idea is to give entrepreneurs (clinicians, engineers, designers, business professionals) a realistic expectation of the time, money, co-ordination and teamwork required to develop a new medical device in India. This book is specially recommended for Indian healthcare professionals who are passionate about solving unmet clinical challenges by inventing new medical devices, but are not sure of how to go about taking their ideas from a concept stage to an actual product. Entrepreneurs from engineering, design and business backgrounds will also find this book useful, as it illustrates ways to engage with doctors, and gives a comprehensive perspective of the path from ideation to commercialization.
