

The Biology of Germinal Centers in Lymphoid Tissue

This book meets the demand of a recent surge of interest in germinal centers, the foci of antigen-induced, rapidly proliferating B lymphocytes, representing sites in mammalian lymphoid tissue where memory B cells are generated. Various aspects of the generation of germinal centers, the somatic hypermutation process and the cellular interactions involved in the selection process are discussed in detail. A chapter on germinal center-derived lymphomas completes the treatment.
