

Methods of Cancer Diagnosis, Therapy, and Prognosis: General Overviews, Head and Neck Cancer and Thyroid Cancer

There are more than 100 types of cancers. In Part II, head and neck cancer is discussed. The global number of annual new cases of this malignancy is ~500,000. More than 11 million people are diagnosed with cancer every year, and it is estimated that there will be 16 million new cases by carcinoma, salivary gland tumors, tonsillar cancer, tongue cancer, nasopharyngeal carcinoma, and retinoblastoma, which are million deaths worldwide. It is estimated that 9 million people will die from cancer worldwide in 2015 and 11.4 million in 2030. More than 70% of all thyroid cancer deaths occur in low and middle income countries. These statistics underlie the fact that cancer is the deadliest of all the United States is ~33,550. Molecular genetics of thyroid cancer, gene expression markers for diagnosis, papillary thyroid cancer cannot be overemphasized.
