

The first book available on the subject, Digital Hearing Aids provides an overview of the signal-processing strategies implemented in modern digital hearing aids. Algorithms ranging from dynamic-range compression and directional microphones to sound classification and binaural noise suppression are clearly explained. The basic equations describing the signal-processing algorithms are presented along with full explanations for those less comfortable with the mathematics, and each processing strategy is accompanied by a summary of its effectiveness. The text is intended for a graduate audiology course in hearing aids and hearing-aid technology.

Instructors Resource Manual for Medical Surgical Nursing: Critical Thinking in Client Care, Community and Nurse-Managed Health Centers: Getting Them Started and Keeping Them Going (A National Nursing Centers Consortium Guide), Fungal Infections in Tissue (Digital Microscopy Video): Volume 1, Respiratory Therapist: Board and Certification Practice Test, Fine Structure of Cells: Symposium Held at the VIIIth Congress of Cell Biology Leiden 1954, Los negocios de Pedro: Vaticano: politica, armas, poder (Conjuradas) (Volume 6) (Spanish Edition),
